

CORONIS®

Medical grayscale
flat panel display system

BARCO

Visibly yours

Filmless perfection in 1, 2, 3 and 5 MegaPixel

Building upon its vast expertise in providing high-resolution display solutions for medical imaging, Barco has developed its CORONIS® family of digital grayscale display systems. The compact, space-saving CORONIS® display systems offer unprecedented diagnostic confidence and lowest cost of ownership in 1, 2, 3 and 5 MegaPixel resolutions.

CORONIS® combines one or more grayscale flat panel displays with a high-speed, 10-bit display controller (1024 shades of gray), MEDICAL® soft-copy QA management software, display driver and digital cabling.

CORONIS® benefits:

- Integrated patent pending I-GUARD® technology for continuous and consistent DICOM-compliant viewing
- High contrast ratio and luminance for superior image quality in all environments
- Unique intervention-free softcopy QA concept
- Full range of configurations: available as single- and dual-head system
- All-inclusive display system, including display controller, QA software, portrait/landscape accelerator
- User-friendly, solid tilt and swivel base
- Lowest cost of ownership

 **CORONIS**

Continuous image quality, fidelity and consistency

Integrated I-GUARD® for continuous DICOM compliance

I-GUARD® is Barco's eye of filmless perfection. The compact I-GUARD® sensor in the corner guards and adjusts the luminance output of the actual diagnostic viewing area at the front of the CORONIS® display, thereby ensuring consistent image quality and continuous DICOM-consistency over time and across displays.

Barco's patent pending I-GUARD® sensor sees what you see, while it only requires a few square millimeters in the corner of the screen to do its job, unnoticed, without disturbing your work. Whether overnight, when the screen is not used, or during a busy day, while the screen is in use, I-GUARD® takes readings from a small, representative patch in the corner and adjusts your screen settings when necessary. The correlation between the luminance measured by the I-GUARD® and the luminance in the center of the display is stored in the device, ensuring reliable, representative results.

To learn more about I-GUARD®, read Barco's dedicated white paper, available at www.barcomedical.com

I-GUARD® in a nutshell:

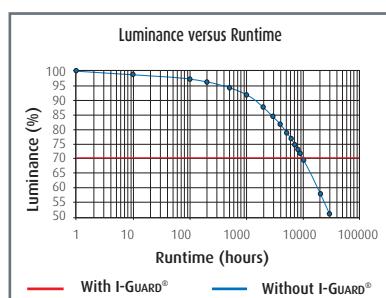

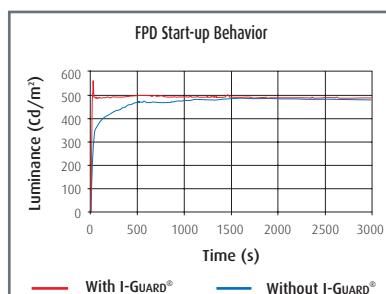

- Detects and corrects instabilities caused by the backlight, driving electronics, liquid crystal pixel cells, display controller and LUTs
- Guarantees continuous DICOM-compliant diagnostic confidence
- Performs continuous intervention-free QA
- Performs measurements with utmost precision

Automated intervention-free QA

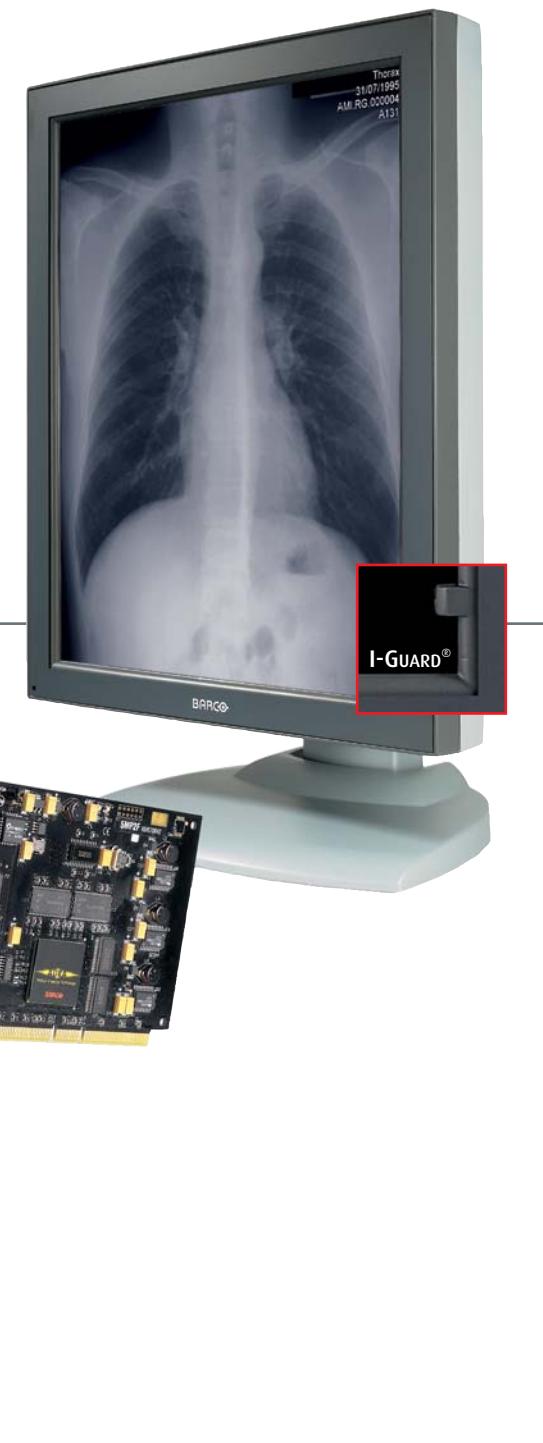

Combined with the I-GUARD® sensor, Barco's MEDICAL® Pro softcopy QA software provides fully automated image Quality Assurance without the need for human intervention. MEDICAL® Pro tracks, maintains and logs display viewing performance, automates QA tasks, initiates display system calibration and sets up the most precise DICOM Look-Up-Table (LUT) calibration using 1024 shades of gray. With the MEDICAL® Pro software included, CORONIS® display systems are ready for integration into the hospital's softcopy QA management system, using Barco's MEDICAL® Administrator software.

History graph from automated QA check

CORONIS

High-speed image rendering

CORONIS® display systems come with Barco's BARCOMED® high-speed digital display controllers. The 10-bit display controllers render the complete DICOM conformance data set with 1024 simultaneous levels of gray. In addition, the dual-head display controllers feature Barco's proprietary AURA technology for ultra-fast image loading and realistic image rendition. BARCOMED® display controllers digitally drive the flat display (DVI standard), thereby eliminating unwanted image artifacts.

Protective front glass

CORONIS® LCD displays are equipped with a protective diagnostic front glass, which protects the panel against damage from intensive use in clinical rooms. Moreover, the front glass provides a film-like intensity and diagnostic look.

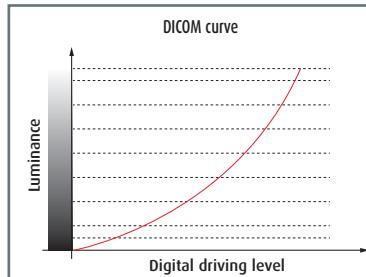

Portrait Accelerator

To enhance response speed in portrait viewing, Barco has developed the Portrait Accelerator, which eliminates software-related application slowdowns in portrait viewing. The Portrait Accelerator comes standard with CORONIS® 3MP and 5MP and is an option for CORONIS® 1MP and 2MP.

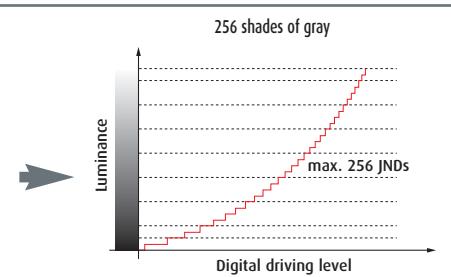

Portrait/landscape rotation

CORONIS® has a solid tilt and swivel base, allowing users to adjust the panel's position to their preferred viewing angle or easily switch between portrait and landscape modes. Barco's I-SWITCH® technology automatically detects if a user has changed the display's orientation and optimizes the display settings accordingly.

DICOM performance: 256 vs. 1024 shades of gray

DICOM curve

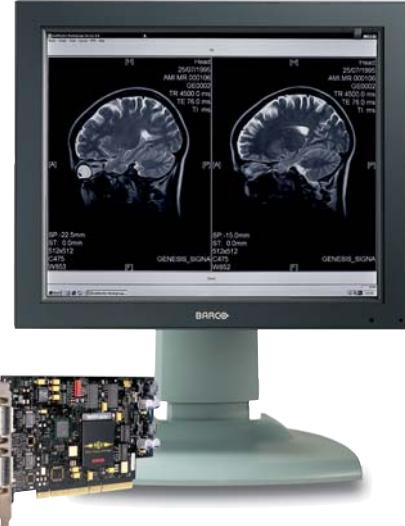

1024 shades of gray, for more DICOM accuracy

CORONIS® 1MP - CORONIS® 2MP

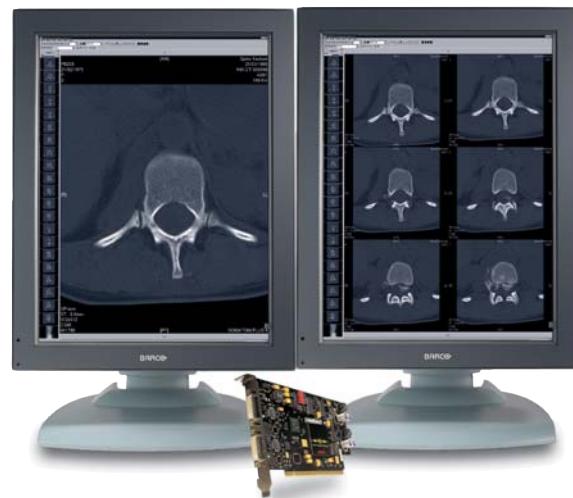

CORONIS® 1MP is an 18.1" grayscale flat panel display with a resolution of 1280 x 1024. CORONIS® 1MP complies with the DICOM/CIE viewing standards: it features correct grayscale tracking over the total luminance range as specified in the ACR/NEMA and DIN standards.

CORONIS® 1MP and 2MP feature both digital and analog inputs. For use in legacy applications with analog signals, the flat panel displays are also available as stand-alone units. Their accurate signal conversion and high brightness make them the perfect solution to upgrade existing CRT-based systems with state-of-the-art technology. To enhance response speed in portrait viewing, CORONIS® 1MP and 2MP can be equipped with Barco's Portrait Accelerator, which eliminates software-related application slowdowns in portrait viewing.

CORONIS® 2MP (1600 x 1200 resolution) offers softcopy performance without compromise. The 20.1" system's short response time and high contrast ratio (1000:1) make it ideally suited to display moving images.

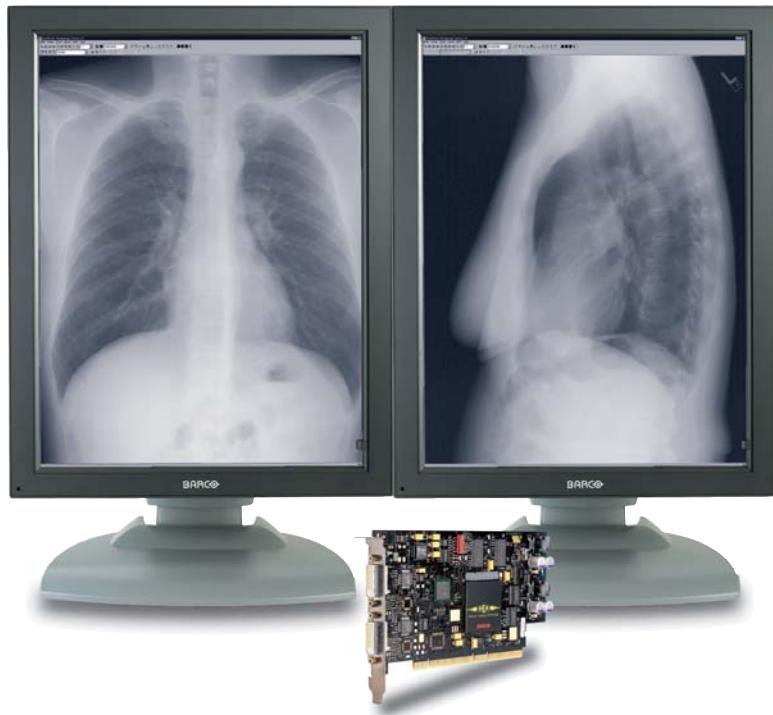

CORONIS® 3MP

CORONIS® 3MP was the first display system to combine diagnostic and flat panel display quality. Equipped with the I-Guard® sensor for image stability and intervention-free calibration, true 10-bit resolution for 1024 simultaneous shades of gray and an ergonomic housing, CORONIS® 3MP has set new standards for medical imaging.

CORONIS® 3MP features a 20.8" grayscale flat panel with a resolution of 1536 x 2048 and a protective glass cover for perfect image representation. With its contrast ratio of 600:1 and high luminance, CORONIS® 3MP can be used

both in dark reading rooms as well as in ambient light environments. CORONIS® 3MP is fit with a solid tilt and swivel base, allowing users to adjust the panel's position to their preferred viewing angle or easily switch between landscape and portrait mode.

The BARCoMED® 3MP2FH digital display controller, designed for use with the CORONIS® LCD panel, features Barco's proprietary 10-bit driving scheme, generating 1024 simultaneous shades of gray. The compact, low power display controller integrates AURA technology for ultra-fast image loading.

CORONIS

Optional DURALIGHT®

Exceptionally long lifetime without compromise

DURALIGHT® is Barco's revolutionary long lifetime backlight option for CORONIS® 3MP display systems. Compared to conventional Cold Cathode Fluorescent Lamps (CCFL), the average lifetime of Barco's new DURALIGHT® backlights is prolonged by a factor of 3 to 5, without increasing power consumption or compromising visual performance of the LCD display system. On average, DURALIGHT® backlights last for 100,000 hours at 500 cd/m², compared to 22,000 hours for conventional CCFL lamps.

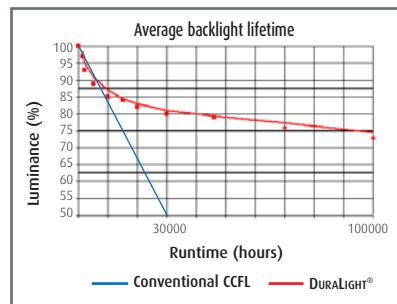

Thanks to the exceptionally long lifetime of Barco's innovative DURALIGHT® backlight, lamp replacement during the economic life span of the medical display becomes superfluous, which substantially reduces the system's cost of ownership.

Barco's DURALIGHT® technology offers uncompromised image quality and image uniformity at all viewing angles. Moreover, DURALIGHT® drastically reduces color shift during the LCD's lifetime, compared to conventional CCFL backlights. In addition, DURALIGHT®'s extended lifetime is combined with optimal energy-efficiency. Unlike other technologies, DURALIGHT®'s long lifetime does not have a negative effect on the system's power consumption. Barco's unique DURALIGHT® backlights come with a 5-year warranty.

DURALIGHT® features and benefits:

- exceptionally long backlight lifetime
- uncompromised visual performance
- optimum energy-efficiency
- redundancy of lamp replacement
- lowest cost of ownership
- 5 year warranty on DURALIGHT® backlight
- BlueBase color temperature

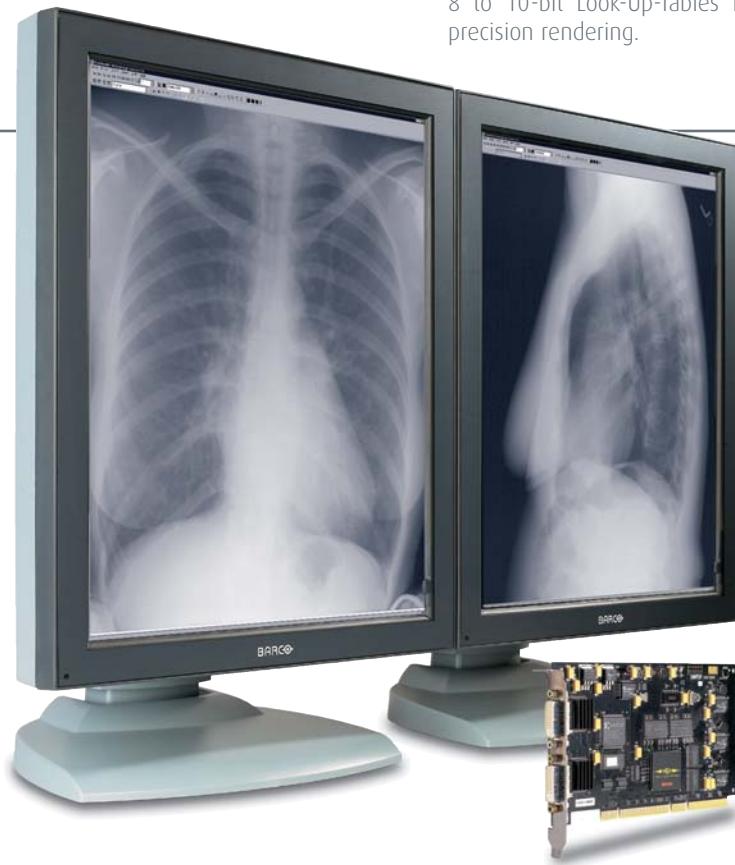

CORONIS® 5MP

Barco's CORONIS® 5MP display station has been engineered for very demanding medical imaging applications. The high-grade 5MP system offers unsurpassed film-like images with ultra-high resolution (2048 X 2560) and MTF, high luminance and high contrast ratio. Furthermore, the 21.3" LCD provides unprecedented image quality without pixelization, a wide viewing angle and perfect geometry. Users can select between ClearBase and BlueBase backlights to diagnose in their preferred viewing mode.

Barco's state-of-the-art 5MP display system ensures low lifecycle cost, user-friendliness and increased productivity (high resolution reduces need for panning and roaming). CORONIS® 5MP is FDA-approved and can be used in portrait and landscape modes thanks to its user-friendly tilt and swivel base. In addition, the CORONIS® flat display is equipped with Barco's Portrait Accelerator for optimum performance in portrait mode.

CORONIS® 5MP is bundled with the dedicated BARCOMED® 5MP2F display controller, featuring Barco's AURA technology for ultra-fast image loading and 8 to 10-bit Look-Up-Tables for 10-bit precision rendering.

 **CORONIS**

Available in BlueBase and ClearBase viewing modes

BARCO's CORONIS® 5MP display system is available in BlueBase and ClearBase viewing modes, allowing radiologists to work in their preferred color temperature. Both color mode options provide filmless perfection for accurate softcopy imaging.

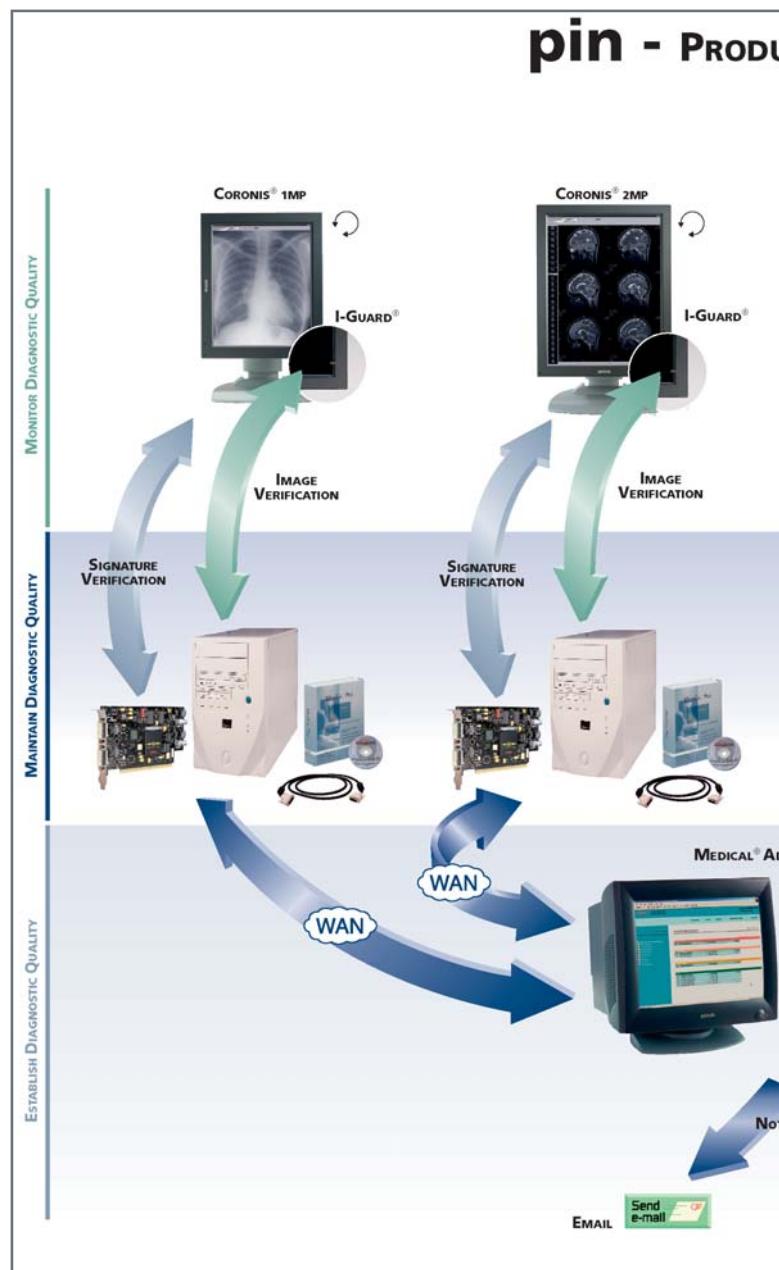

PIN: centralized QA management at your fingertips

Ambient intelligence for worry-free filmless perfection

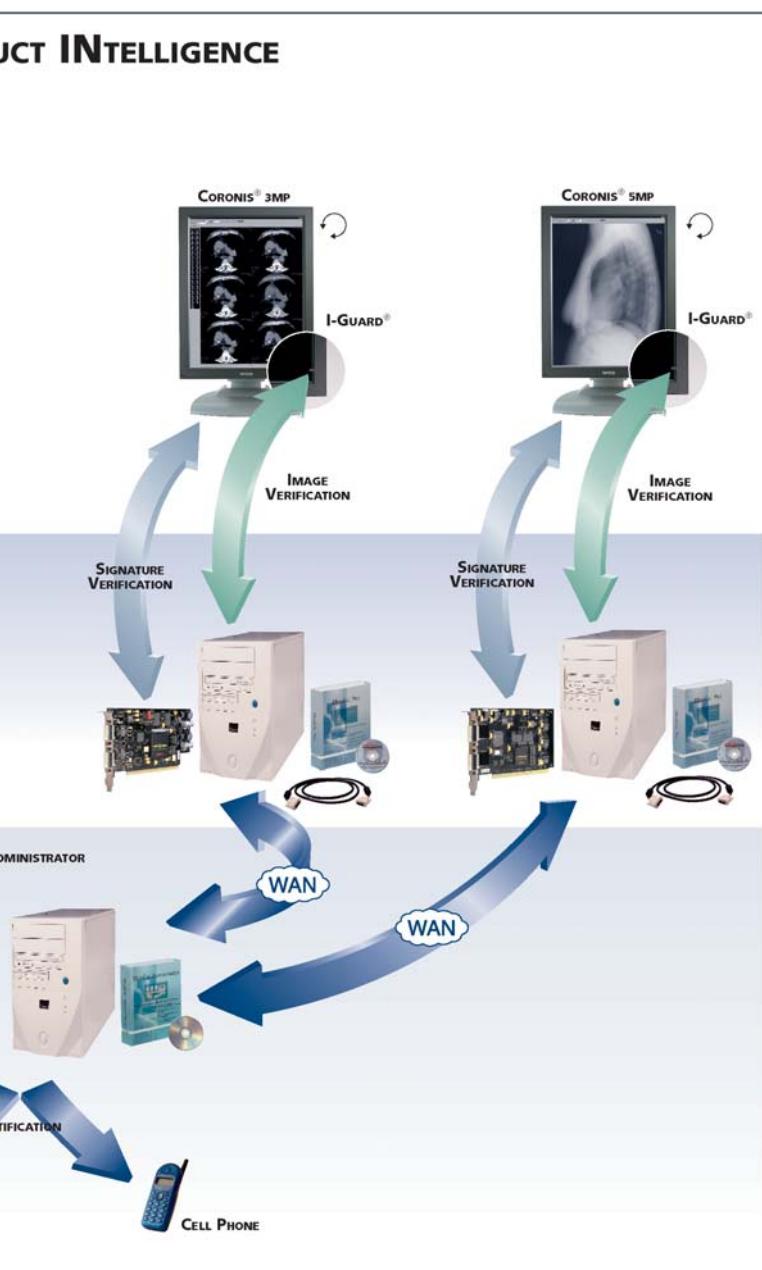

CORONIS® display systems are fully compatible with Barco's revolutionary PIN (Product Intelligence) concept, which ensures worry-free diagnostic reading and image distribution by means of "intelligent" technology.

Barco's PIN-compatible PACS products form a distributed network of web-enabled, intelligent devices. The integrated I-GUARD® sensor constantly monitors image quality and the collected data is transparently processed and logged with Barco's MEDICAL® software. The surrounding network of invisible, intelligent devices keeps administrators informed about the display system's consistent quality. If the imaging chain fails, administrators can intervene from any location via user-friendly web interfaces, without disturbing normal radiology activities.

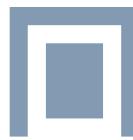

品
品 pin
compatible

DUCT INTELLIGENCE

PIN in a nutshell:

- Constantly maintains diagnostic reading quality for worry-free filmless imaging
- Monitors diagnostic tolerances and maintains quality at predefined levels
- Keeps administrators up-to-date of system status and logs data in real-time
- Allows for intervention-free adjustments from a remote location, even during daily radiology practice
- Drastically reduces lifecycle cost (up to 80% for digital display systems)

Barco medical imaging systems

Many years of experience in all areas of display technology gives Barco a unique advantage as it continues to expand its color and grayscale display technology for a variety of imaging applications. Barco has established a solid reputation in the medical imaging market with high-performance display technology for X-ray, digital radiography, PACS, ultrasound and magnetic resonance viewing applications.

Barco's expertise in providing high performance display systems is supported by a worldwide network of research, development and support services. A global sales organization, with regional support people who understand your language and requirements, complements Barco's partnership approach.
